

Amazon Gold

- Smart Features
- Lifetime Warranty
- User Friendly Reliability

Smart Technology That Delivers Performance You Can Count On

The Amazon Gold Series system softens, filters, reduces ferrous iron, clarifies and polishes your water to give you an abundant supply of luxuriously conditioned water throughout your home.

A sophisticated microprocessor controller tells the system when to regenerate and just how much salt to use to keep the water quality constant. You save money because the system uses less salt, electricity and water by regenerating only when necessary, and only using the amounts needed.

Amazon Gold Series Features:

Exclusive Composite Valve

Uses advanced NORYL™ composite material for enhanced strength and to protect the valve from expansion or shrinkage due to pressure and temperature demands.

Unique Control Valve

Sophisticated microprocessor with simple set-it-and-forget-it controls gives you exceptional reliability and convenience.

Powerful High Torque

Motor Self-lubricating and with power to spare, for maintenance-free, long life operation.

Large Porting & Internal Piping Amazon Gold gives you generous water flow rates up to 21 gallons per minute.*

Automatic Bypass During Regeneration No chance of being without water, or drawing salty water, during the regeneration process.

Conditioning Resin The resin possesses an unusually high conditioning capacity and resistance to bead breakage, especially important in chlorinated water supplies. Filters and removes high amounts of ferrous iron.¹

Activated Carbon Specially graded and treated activated carbon clarifies and polishes your water.

Handy Guest Button A simple push of the button starts complete regeneration cycle giving you extra treated water if and when you need it.

Big Salt Refill Opening Quick. Easy. And no spills.

¹ does not remove ferric colloidal or bacterial iron

* Tank size and local water pressure will affect unit's operating flow rate.

A smart, economical way to solve severe water problems at your house.

Tank-Within-A-Tank Construction Rugged tank is wound with over 3 miles of glass filament for extraordinary strength. Inside there's another tank of sanitary plastic so your drinking water will never touch fiberglass interior surface.

Metered Refill Lowers Salt Cost The system measures and prepares the amount of brine required based on desired settings.

How the Amazon Gold System works:

Step 1: Raw, untreated water enters RainSoft's exclusive rugged control valve and flows down through the resin tank.

Step 2: The water is filtered and treated as it passes through the special "ion exchange" resin. Specific unwanted foreign substances are ionically retained in and on the resin. The optional

charcoal bed further polishes and clarifies the water.

Step 3: Once completely conditioned, the water exits the resin tank through the riser pipe and out the control valve.

Step 4: At metered intervals, the unit begins a regeneration process. Using salt as a regenerant, the retained foreign substances are flushed out of the system and down the drain. The unit then prepares itself for the next conditioning cycle.

Service Features

- Manual advancement of cycle for ease of testing.
- Data stored in memory is easily accessed.
- During regeneration cycle, sequence number with time remaining is displayed.

Note: Potassium chloride may be used instead of salt.

Operating Features

- Easy-to-set timer with visible LED prompts make programming a breeze.
- Full menu of settings allow you to customize system to your family's needs.
- Computer control prevents you from running out of water.
- System sounds an alarm to tell you when it's time to refill the brine tank with salt.
- The system maintains memory up to 72 hours without a battery backup, in case of a power outage.
- Calculates and uses optimum salt and water combination for each regeneration.

Other Benefits

- All plastic enclosures fit tightly to protect control components from outside elements.
- An ultraviolet inhibitor prevents the degradation of materials caused by sunlight in outside installations.
- Brine tank is equipped with overflow protection to protect against overflow due to power outages during regeneration.

RainSoft
Water Treatment Systems

Many RainSoft water treatment products and components, including Amazon water treatment systems, are tested and certified by various independent testing and validating organizations, for product integrity, contaminant reduction claims, and to ensure that products perform as advertised. Refer to manufacturer's Performance Data Sheet for specific claims and certifications.

Benefits will be provided by various types of RainSoft equipment when installed and operated according to manufacturer's recommendations. Operational, maintenance and replacement requirements are essential for the product to perform as advertised. All claims based on best available information at time of printing. Manufacturer makes no representations as to the suitability of this equipment for a particular application. Buyer relies entirely on dealer's recommendations in the purchase of this equipment. Independent RainSoft dealers may include, together with your RainSoft product, a product or component that is not manufactured by RainSoft or their parent company, Aquion Partners L.P. Any non-RainSoft product may be covered by the manufacturer of that product, and is not covered by the RainSoft warranty. Aquion Partners L.P. does not warrant that your RainSoft product and the non-RainSoft product will perform properly when used together, and assume no liability therefore.
